

## Dan Langevin

Co-Founder and CTO

Daniel Langevin is co-founder and CTO of Vericred, the first end-to-end quoting, enrollment and member management API platform for health insurance and employee benefits. By simplifying the exchange of data between carriers and technology companies, Vericred is enabling the digital transformation of the health insurance and employee benefits industry. Based in New York and backed by leading investors, Vericred offers robust solutions for the employer market, as well as the under 65 individual, Medicaid and Medicare markets.

As CTO, Mr. Langevin leads the development and maintenance of Vericred's API platform. Under his supervision, the company's engineering and product teams have built the infrastructure to support digital connectivity between carriers and tech companies that are transforming the way health insurance and employee benefits are quoted, sold, enrolled, and managed.

Previously, Mr. Langevin served as CTO at Lifebooker, a marketing SaaS provider for the health and beauty industry, where he developed dynamic pricing algorithms and tools to manage the company's inventory of service abilities. He was also the CTO of Lawdingo.com, a platform designed to help people find and hire a lawyer virtually, senior engineer at ShermansTravel, a travel deal aggregator and an online marketing manager for Xandros Software where he supervised, developed and tracked online advertising campaigns.

Mr. Langevin is a self-taught engineer, fluent in several coding languages including Ruby, Javascript, Java, and PHP. He has worked primarily with Ruby on Rails, an open-source web framework optimized for sustainable productivity. He presents regularly at local Ruby meetings and is the author of several open source libraries.

Mr. Langevin received a Bachelor of Science in Psychology from New York University. He resides in Manhattan, N.Y. with his wife, Laura, and son, Max. In his spare time, he can be found doing Crossfit, playing the guitar or cycling.
